

BE IN THE KNOW! HAVE A VOICE IN MAKING BUILDINGS SAFER BY GETTING TO KNOW BDA BASICS

Schedule one of CC&N's industry experts to deliver important information that your business or safety organization needs to know in order to ensure public safety for on-site communications and help define this initiative. An educational presentation by CC&N is helpful to everyone from EMT responders, police and fire departments to contractors, architects and business owners. Our presentation and discussion includes topics such as

- Public Safety vs. Cellular DAS
- BDA Design and Building/Environmental Considerations
- IFC/NFPA Code and Local Ordinance(s) Discussion

Our public safety experts will also go through the impact of using Bi-Directional Amplifier (BDA) to enhance radio frequency (RF) signals throughout buildings. Understand the criticality of creating relationships with the local Authority Having Jurisdiction (AHJ) and Public Safety Solutions vendors early in the pre-construction cycle.

In order to schedule your Public Safety Education Presentation please provide the following information along with any comments or questions you might have.
