DATA CENTER SOLUTIONS

Day 2 Infrastructure Support

CC&N embedded Day 2 Infrastructure Support teams protect uptime, manage continuous change, and sustain the performance of data center environments.

Once a data center is operational, the work shifts. Systems expand, infrastructure evolves, and environments must remain stable while change continues. CC&N remains engaged inside the environment, providing embedded Day 2 support that helps teams manage change without compromising performance.

Our support services include:

- Embedded technicians working inside active data center environments
- Consistent execution aligned with operational workflows and ticketing systems
- Fast issue resolution through physical and infrastructure-level understanding
- Ongoing support for moves, adds, and changes (MAC)
- Disciplined labeling and documentation that preserve infrastructure clarity over time
- Proactive maintenance that preserves infrastructure integrity

> "Most providers show up to complete a task. Our teams stay with the work until the problem is fully resolved. Our teams are focused on getting the details right so issues don't surface later."

Dan Witkofski
President, CC&N

Why Companies Trust CC&N

CC&N brings decades of experience and a 100% employee-owned mindset to mission-critical environments where uptime is non-negotiable. Our teams operate across hyperscale, colocation, and enterprise data centers, delivering the scale, consistency, and operational discipline required inside live facilities. After data center installation is complete, CC&N provides continuity inside the environment, helping organizations maintain performance and stability as infrastructure evolves. Our teams take ownership of the work, ensuring issues are fully addressed and environments remain organized and reliable over time.

Let's Maintain What Matters Most
